

Climate Controls
Energy Curtain Systems
Vent Automation

Advanced thinking, it's what creates innovative businesses, and in the case of Wadsworth Control Systems, an entire industry.

As the first name in greenhouse automation in North America, we continue to allow ourselves the freedom to imagine and invent new solutions and technology. When you pair this drive to create with over sixty years of experience, you have an unbeatable combination.

Climate Controls

Whether you need a sophisticated, integrated control or a simple staged control, you'll find what you need at Wadsworth. We offer advanced, high-performance integrated controls that deliver a solution in the most demanding and complex environments. Our staged controls can save you money with assigned heating and cooling stages, simple and efficient.

Energy Curtain Systems

Wadsworth's PowerPull™ energy curtain systems are engineered to provide an exact match for your needs. Unlike other systems, our push/pull design is highly durable and virtually maintenance free. Reduce energy costs up to 40% while improving crop quality and lowering your water needs. Energy curtains are used for heat retention, cooling and shading. By maintaining uniform temperatures they create an environment that enhances control of temperature, humidity and light.

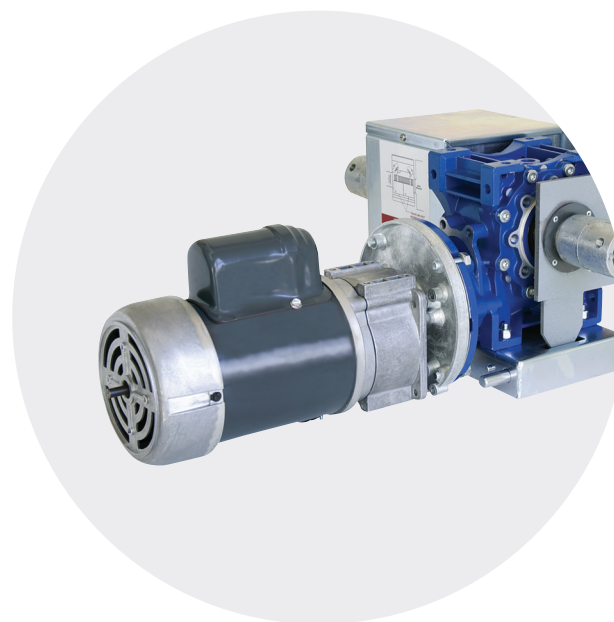

One Source

for Controls, Curtains and Vents

Wadsworth's simple, versatile designs have always led the way, which is why we're in the Horticultural Hall of Fame, and in more greenhouses than any other climate control company in the U.S.

We've got you covered because we offer a complete system, from vent automation and energy curtains to sophisticated environmental controls. Our products are packed with features to help you grow better. Wadsworth has always listened to and understood growers' needs. Our products are known throughout the industry for superior design and reliability.

Wadsworth sets the standard in climate control. We always have, and we always will.

Vent Automation

Only Wadsworth offers a complete vent system to work seamlessly in your controlled environment. Our all-new drive units are amazingly powerful, dependable and efficient. Our vent system is simple to install, and like all of our products, UL approved, which means you won't need an expensive field inspection when you use our equipment.

Training

Get the most from your climate control system with the help of an expert. You and your staff will benefit from the hands-on training and individual attention custom designed for your specific needs. We offer training on environmental controls, curtain and vent systems. On-site and virtual training available to make your equipment more valuable than ever.
