

# Wadsworth.Cloud

Bring the power of Seed control home

## FEATURES

- Access your Seed control remotely using iPhone, Android, tablet, or computer
- Same powerful functionality at the control and remotely
- Identical interface on all formats
- Automatically backs up settings and data
- Provides links to download the latest versions of Seed and Sphere
- Manage multiple sites – great for consultants and large growers
- Subscription based
- Choose the number of users and a data tier to suit your needs
- Same secure environment as the Seed control
- Starting at 1 user and 100 MIB for just under \$30

*"Just wanted to give feedback on the app. I don't know how I was operating without it. It's made my life so much easier, and it's clear that it will be even more valuable as we continue to grow."*

— Jonathan Nelson  
Greenleaf Gardens, LLC, Ohio

*"The biggest plus is peace of mind outside of work. Being able to check in on each zone as if I were onsite at the controller is amazing. And when I am onsite, using the app for maintenance is a real time saver. I can make adjustments right at the equipment and watch it respond."*

*I love the identical interface on all devices, the controller, the computer and the app are all the same. There's no learning curve."*

— Danny Janes  
Collective Elevation, Montana
