SMART GREENHOUSE CONTROL
juniper and juniper flex with optional cloud access

 **WADSWORTH**
Control Systems

Simple to use. Powerful results.

The Juniper value—built for today and ready for tomorrow Now available in two options to fit your greenhouse.

Future-Ready

Designed to grow with your operation.

Budget Conscious

Easy to install, simple to upgrade, and proudly American made.

Effortless Smart Control

Monitor and control your greenhouse in real time from anywhere with Wadsworth.Cloud

Reliable & Robust

Confidence and control with alerts, data logging, diagnostics, backups and tech support.

Knowledge and experience combined with a complete climate solution make Wadsworth Control Systems the first choice for greenhouse environments.

“I’m a big fan of juniper. As a grower it tells me everything I want to know when I enter a greenhouse. Thank you!”

Harry Vlottes – General Manager, Blooma Farms

F A R M S

Juniper is smart, streamlined control

Built for Changing Conditions Throughout the Day

- Setpoints adjust automatically with sunrise and sunset
- No need to constantly adjust schedules as day length changes
- Maintains more consistent conditions from day to night

Greenhouse conditions don't follow a fixed clock—your control shouldn't either.

System Security & Reliability: Designed for facilities that require secure, accountable control

- Secure user access with login protection and change history
- Know who made changes and when
- Alarm notifications for critical conditions
- Detects manual overrides and returns to automatic control
- Built-in diagnostics and backup controls

Data & System Capabilities

- Graphing for environmental data and equipment runtime
- 30-day history, with unlimited storage via Wadsworth.Cloud
- Export data for analysis and recordkeeping
- Easily expand system capabilities as your needs grow

Choose Your Control Style

Juniper

Structured, staged control for straightforward systems

- 2 heating stages
- 4 cooling stages
- 2 modulating outputs

Juniper Flex

Configurable control for more complex greenhouse setups

- Flexible heating and cooling stage configuration
- Supports additional modulating equipment
- Ideal for naturally ventilated or mixed-equipment layouts
